

Clarity

When analyzing each rubric for clarity, it is essential to determine if the criteria are accessible to the intended audience. Effective descriptors must do more than simply label performance; they must provide a vivid picture of the work.

According to Virtual Gallery Walk Rubric Slideshow (n.d.), on page 4, performance level criteria describes what the criteria will look like in the work at varying quality levels. If the descriptors are vague, students cannot accurately gauge their progress or understand the specific expectations of the assignment. Clear rubrics ensure that students can self-assess and improve their work by providing transparent roadmaps for success.

Thus, the following is true.

Rubrics 1, 5, and 4 have good clarity because they provide a clear representation of expectations and the work to be done.

Rubric 3 kind of covers this, but it lacks clarification of expectations.

Rubric 2 does not cover this because it is highly ineffective, and it offers no specific expectations.

Specificity

When assessing the specificity of a rubric, one must determine if the document provides enough detail to serve as a functional roadmap for the learner. A high-quality assessment tool should avoid vague generalizations to ensure the path to success is visible. According to Virtual Gallery Walk Rubric Slideshow (n.d.), a fundamental quality criterion is that the rubric "makes assignment expectations explicit" (p. 6). Without this level of detail, students may struggle to understand what is required of them or how to improve their current performance. Virtual Gallery Walk Rubric Slideshow (n.d.) explains "explicitly expresses the major components they are assessing" (p. 4). This precision allows students to focus on the essential skills required for the task rather than guessing at the educator's intent.

Thus, the following is true.

Rubrics 1, 5, and 4 have good specificity because they provide a clear road map of expectations and the work to be done.

Rubric 3 kind of covers this, but it lacks specificity of directions via expectations.

Rubric 2 does not cover this because it is highly ineffective, and it offers no specific expectations or high quality road map for the learner.

Fairness

When evaluating a rubric for fairness, it is necessary to determine if the expectations are transparent and objective enough to ensure every student is graded on the same merit. A fair rubric promotes equity by removing guesswork from the assignment. According to Virtual Gallery Walk Rubric Slideshow (n.d.), from Section 1 on page 3, a primary reason to use these tools is that a rubric clearly states the expectations for student work.

Furthermore, the language used within the levels of performance must be accessible to prevent bias against students with different linguistic backgrounds. Virtual Gallery Walk Rubric Slideshow (n.d.) explains "uses clear, student friendly language" (p. 4). When rubrics use plain language and explicit components, they allow all students to self-assess accurately and understand exactly how their work will be measured.

Thus, the following is true.

Rubrics 1, 5, and 4 have good fairness because they are effective and provide student friendly language and expectations that satisfy Virtual Gallery Walk Rubric Slideshow (n.d.) expectations.

Rubric 3 kind of covers this, but it lacks transparency and objectives.

Rubric 2 does not cover this because it is highly ineffective, and it offers no specific expectations, which does not account for fairness.

Alignment

When evaluating the alignment of a rubric, it is essential to confirm that the criteria directly reflect the intended learning outcomes and curriculum standards. A rubric that lacks this connection fails to measure the actual progress of the student toward the goal.

By rooting the assessment in this specific target, educators ensure they are grading students on the knowledge they were expected to acquire. Furthermore, the structure of the rubric must facilitate the measurement of this objective by categorizing them into manageable parts. Virtual Gallery Walk Rubric Slideshow (n.d.) explains "breaks LT (Learning Targets) down into smaller chunks" (p. 4).

Thus, the following is true.

Rubrics 1, 5, and 4 have good alignment because they are effective and provide student friendly language and expectations that satisfy Virtual Gallery Walk Rubric Slideshow (n.d.) expectations.

Rubric 3 kind of covers this, but it lacks objectives that create alignment.

Rubric 2 does not cover this because it is highly ineffective, and it offers no specific objectives, which does not account for fairness.

Actionability

When analyzing rubrics for actionability, it is vital to determine if the performance level criteria provide a roadmap for growth. A rubric that lacks descriptive detail fails to tell a student how to move from one level to the next. According to Virtual Gallery Walk Rubric Slideshow (n.d.), from Section 5 on page 3, a rubric provides a guide for student regulation. This is a factor that makes it actionable.

For a rubric to be truly actionable, it must go beyond simple scores and describe specific behaviors or qualities. Virtual Gallery Walk Rubric Slideshow (n.d.) explains "describes what the criteria will look like in the work at varying quality levels" (p. 4). This level of detail ensures that the assessment serves as a teaching tool that informs future performance rather than just a final judgment.

When analyzing rubrics for actionability, it is vital to determine if the performance level criteria provide a roadmap for growth. A rubric that lacks descriptive detail fails to tell a student how to move from one level to the next. According to Virtual Gallery Walk Rubric Slideshow (n.d.), from Section 5 on page 3, a rubric provides a guide for student regulation. This is what creates actionability and credibility of the rubric and without the factors that create accountability and credibility, the rubric is not actionable.

Thus, for a rubric to be truly actionable, it must go beyond simple scores and describe specific behaviors or qualities that create student regulation and accountability. Virtual Gallery Walk Rubric Slideshow (n.d.) explains an actionable curriculum "describes what the criteria will look like in the work at varying quality levels" (p. 4). This level of detail ensures that the assessment serves as a teaching tool that informs future performance rather than just a final judgment Thus making it credible, student regulated, and accountable.

Thus, the following is true.

Rubrics 1, 5, and 4 have good accountability because they are credible and provide student regulation.

Rubric 3 kind of covers this, but it lacks credibility that creates actionability.

Rubric 2 does not cover this because it is highly ineffective, and it offers no specific objectives that create student regulation, which does not account for credibility.

Rubric Classification: Good, Bad, and Ugly

Based on an analysis of the provided materials, rubrics can be categorized by their effectiveness in guiding student performance and providing clarity and other great qualities via good attributes and can not through bad ones and ugly qualities.

The Good

Rubric 5, 1, and Rubric 4 represent the good category. These tools are effective because they provide high levels of specificity and support student autonomy. According to Virtual Gallery Walk Rubric Slideshow (n.d.), a strong rubric "supports student autonomy (independence, freedom, decide for oneself and pursue a course of action)" (p. 3). These rubrics support this and have great markers for the rest of the qualities analyzed for rubrics, and from that, they are not bad or ugly.

Rubric 3 has some good attributes like vague objectives that should, but do not, create a clear roadmap for improvement.

The Bad

Rubric 3 is classified as bad. While it attempts to state expectations, it fails to provide a functional roadmap for improvement. Virtual Gallery Walk Rubric Slideshow (n.d.) explains the missing part of this rubric, which is "describes what the criteria will look like in the work at varying quality levels" (p. 4). Rubric 3 relies on rating scales that lack these descriptive guidelines, leaving the student without actionable feedback on how to bridge the gap between their current work and the desired target.

Rubric 2 is also bad. It has a vague grading rubric that could be changed drastically. This rubric is highly ineffective because it offers no specific expectations, making it nearly impossible for a student to self-assess. It consists of a vague grid with categories like Skills and Accuracy paired only with numbers 1 through 4. Without clear definitions of what constitutes a 4 versus a 2 the grading becomes subjective and fails to serve as a meaningful part of the learning cycle.

The Ugly

Rubric 2 is classified as ugly because it is not that appealing. Everything in it looks scattered and organized with loosely held objectives. The same goes for Rubric 3. It looks scattered to an extent and it does not provide well organized objectives.
